

OEMV-2 PC/104 Module

MicroBee Systems now offers the Novatel OEMV-2 L1L2 GPS in PC/104 format. Utilizing a powerful XR16C2850 Dual 128 Byte FIFO UART this CPLD based module allows access to both the data port and differential correction port with a full 128 bytes of buffer space at up to 921kbs. This can mean just one interrupt per GPS message! In addition this unit offers many special features such as simple rotary switch address selection, the third GPS speed serial port is available at RS-232 level for a External CDU. 1PPS output signal is RS422 (for TTL use only one side).
